

3D Web-based Training and Education Modules

Futron's 3D worlds and objects are the cutting edge of education and training systems. Futron designs and develops tools that can be used in the educational arena as well as industry and corporate environments. We design with expansion in mind and our 3D worlds and objects are low in file size to enable quick access in today's fast-paced world and distributable by internet, intranet, or CD-ROM. Accompanied by our powerful tracking programs, our products can provide valuable feedback to the user and the training administrator. Futron's tools are custom-made to insure that your specific requirements and objectives are met.

Features of this Service

- 3D world environment
- 3D objects
- Login capabilities
- Dynamic interactive activities
- Teacher Guides
- Tracking database
- Standards-based
- Certificates of completion

When 3D training and testing are combined with computer-based 2D educational products and traditional written material, these environments provide a complete suite of instruction.
